

# What s The Point Of Nobody Caring About Nissan Qashqai Key Fob

---

## Reasons Why Your Nissan Qashqai Key Fob Won't Work

The Qashqai has a distinctly SUV feel due to its larger dimensions. Moreover, the wheel sizes of 19 inches in Ti and ST-L models can be a bit stiff at times. The front tyres of Qashqai may also lose grip on rough surfaces and its CVT can sometimes show wrist-flexing torque steering.

This is usually caused by an unresponsive battery that can be replaced in a matter of minutes. Make sure the new battery is of the same voltage, size and specification.

## Water Damage

Water damage is one of the most frequent causes for a Nissan keyfob to display the "key ID wrong" message. The key fob has rubber seals that shield the electronic chip inside, however prolonged exposure to moisture could cause it to cease functioning properly. This is often the case when you drop your key fob into the ocean or a swimming water pool, but it could also happen if it gets wet due to soapy hands or rain.

If your key fob has been exposed to water over an extended period of time it is possible to clean it using isopropyl and electronic cleaner. It may also require taking to an expert to repair or replace it.

If your key fob does require replacement, the procedure is relatively simple. Make sure you have the correct multipack (CR2032 3V). Open the front and rear cases using the flat-head screwdriver. Remove the clips made of metal, then remove the old battery and replace it. Reassemble the fob and replace the mechanical key. Verify that it is working properly. If it isn't, you'll need to take it to a nissan note key hardbody key (<https://olderworkers.com.au/author/ossby62rxss1-sarahconner-co-uk>) dealer or a professional auto locksmith to repair the chip in the key. The chip is not usually damaged by water so it should not cost a lot.

## Dead Coin Battery

The coin battery is another frequent reason why your nissan micra spare key Qashqai remote key fob might not function. The batteries last for about three to five years, however they will eventually fail if the fob has been frequently dropped. You can replace the battery, however, make sure it's the same voltage and the same dimensions as the original. If you install a new battery, it could cause the key to be assigned a wrong key ID. This will prevent it from being paired with your vehicle.

The best method to replace the battery of a coin in the Nissan Qashqai Key Fob is to open it with an incredibly small screwdriver. The screwdriver should be put into a small notch at the bottom of your key fob. The screwdriver should be gently twisted to separate the two halves. Remove the old CR2025 battery and replace it with a brand new one, taking note of the location of the previous one inside the fob.

Before putting the new battery in place check to ensure there isn't any dirt or water damage on the terminals. If there is clean the terminals using some isopropyl ethanol. Make sure that the pole cables are connected correctly. They must be connected to the positive and negative poles of your battery.

## Fault Diagnosis

If your Nissan Qashqai's key fob stops working after exposure to pure rainwater or clean tap water it could be a sign there is an issue with the internal chip. A battery change won't solve the issue, and you'll need to purchase another key fob. If you dropped the key fob on the ground and it stopped functioning immediately it's likely due to damage to the internal chip. It is possible to get the key fob to function again if you take it out and clean the chip using paper towel and isopropyl alcohol and then put it back into.

A common error that you might see on your dashboard is "Key ID Not Correct." This means that the vehicle cannot recognize the key fob and not allow it to start the engine. The problem can be caused by a variety of factors, including water damage, undetectable issues in the key fob's circuitry or RFID interference.

The key fob will not function when the 12 volt batteries are dead or don't provide enough electric current. This could affect the remote keyless system as well as central locking in your Nissan Qashqai, as well as stopping you from starting your engine with the key fob (if equipped with Intelligent Key). If you are unable to unlock or lock the door manually, you should check the batteries on your key fob to make sure they're in good condition. You could also try reconnecting the battery in order to reset your transmitter.

## Reprogramming

If the key fob was not submerged into saltwater it should come back to life with a simple wash of clean water. You can also clean the electronic chip by using isopropyl or electronic cleaner. If none of these work, you may need to replace the key fob.

If your nissan spare keys Intelligent Key is still not functioning, there may be a problem with the connection between it and the car. Start by turning the ignition key without beginning the car. Continue this process until the hazard light blinks twice. Turn the vehicle off and take the keys out.

Open the fob compartment of your vehicle. It's usually on the door jamb or the handle of the door for the driver. Find the small "program" button and press it. You should hear a chime after the process is completed.

It's time to put your Intelligent Key to the test. Stand some distance away from the vehicle, and hit all the buttons on the key. If the lights flash and the horn beeps it means the key is successfully linked to the Nissan. You can also test it close to the nissan ignition key replacement.
